***Restriction/Election***

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 7 and 8, drawn to a substantially pure polypeptides, classified in class 530, subclass 350, for example.
- II. Claims 11-15, drawn to substantially pure nucleic acid molecules encoding functionally equivalent P-P II gene products, classified in class 536, subclass 23.6, for example.
- III. Claims 16-18, drawn to a transgenic plant containing a transgene comprising a gene of interest operatively associated with a P-P II promoter, classified in class 435, subclass 468, for example.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II-III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions have different modes of operation and effects. The polypeptides of Group I are not required by the nucleic acid molecules of Group II, or the transgenic plants of Group III. The polypeptides and nucleic acid molecules of each of the groups have distinct structures, and do not require each other for their production. The polypeptides of Group I and nucleic acid molecules of Groups II-III can be produced by alternative means, such as chemical synthesis. Further, a search for the polypeptides of Group I may not reveal any information about the genes encoding them.

Art Unit: 1638

Inventions II and III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions have different functions and effects. The transgenic plant of Group III does not require the nucleic acid molecule of Group II. The nucleic acid molecule of Group II does not require the P-P11 promoter or the transgene of the transgenic plant of Group III.

Because these inventions are distinct for the reasons given above and the search required for Group I is not required for either of Groups II-III, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
